ABSTRACT

This analysis looks at how Immovable Group, also known as InMobi Group, changed and grew from 2023 to 2025. It uses information from the Mobile Marketing Handbooks from 2023 and 2024 The Marketers Guide to India's Festive Season 2025 and a dataset called "InMobi_Data_Analysis.xlsx". This paper wants to know how InMobi Group was able to get over 881 million users in India to use their services. They did this by changing from a company that just did advertising to a company that focuses on giving users a good experience.

The study looks closely at the two parts of InMobi Group: the part that works with other businesses called InMobi Advertising and the part that works with regular people called Glance. InMobi Advertising helps figure out who users are without using cookies. It does this for over 2 billion people who use the open web. Glance has a feature called "Surface Zero" that lets it show content to users right away without them having to open an app. It does this on over 450 million devices.

InMobi Group also has services like Repose, which is a live commerce platform and Nostra which is a casual gaming platform. These services help InMobi Group deal with the fact that people's attention spans are getting just 8.25 seconds and that people are getting tired of downloading new apps. The numbers show that InMobi Groups services are working well with an increase in ad impressions during peak festive times, +204% for quick-commerce and +202% for e-commerce.

Finally, the paper talks about some of the challenges that InMobi Group faces like following new privacy rules making sure content is safe and appropriate and using artificial intelligence to give users a personalized experience, in real-time. InMobi Group has to navigate these challenges to keep growing and giving users what they want.

INTRODUCTION

The way we use the internet has changed a lot. We used to use desktop computers. Now we use our mobile phones for everything. To be successful companies need to give people what they want when they want it. This report is about Immovable Group, also known as InMobi Group and how they are doing from 2023 to 2025. We will look at how they make money from consumers in India.

1.1 Digital Advertising Industry in India

India has a lot of people using the internet over 881 million users. This is because mobile phone data is cheap and 4G and 5G are getting better. Companies are changing how they advertise. Some key things about this market are:

- Ad Format Evolution: Companies are moving away from style ads and using new kinds of ads like videos and interactive ads.
- Cyclical Performance Surges: During holidays people use their phones a lot more. Companies see a big increase in ad views.
- Demographic Expansion: The internet is not just for cities anymore it is for everywhere

and companies need to make ads that are relevant to different areas.

1.2 Importance of Mobile Marketing

In India most people use their phones to get on the internet. They do not use desktop computers. Mobile phones are very important for companies to reach people. There are a reasons for this:

- The Attention Deficit Economy: People have attention spans, only 8.25 seconds so companies need to give them what they want right away.
- Application Download Fatigue: People do not want to download a lot of apps so companies need to find ways to reach them.
- Continuous Engagement: Mobile phones are always with people so companies can reach them all the time.

1.3 Overview of Digital Transformation: From App-First to Experience-First

Companies used to make apps but now they need to give people a good experience. They need to make it easy for people to use their services without having to download a lot of apps. InMobi Group has done this with its dual-engine setup. On the business side they changed how they track people on the internet. On the consumer side they made it so people can use their services right on their phones lock screen. This gives people an experience and makes it easy for them to use InMobi Groups services, like live commerce and games without having to download a lot of apps. InMobi Group is doing well because they are giving people what they want, when they want it on their phones. InMobi Group is using this to make money from consumers in India. InMobi Group is changing how they do things to keep up with the changing market, in India.

COMPANY PROFILE

2.1 About InMobi

InMobi Group, which is also known as Immovable Group is a company that does mobile advertising and digital experience work. InMobi Group is special because it was the technology start up in India to become very successful which is called a "Unicorn" status. The company has two parts:

InMobi Advertising, which helps big companies with their advertising needs and it also does work with many websites.

Glance Ecosystem, which is like a company that makes a special lock screen for phones that people can use to buy things and play games without having to download any apps.

2.2 Leadership & Core Structure

The company was started by four people: Naveen Tewari, who is the CEO, Mohit Saxena, Amit Gupta and Abhay Singhal. They all went to a school called IIT.

The company has two offices: one in Bengaluru, India which is where most of the work gets done and one in Singapore, which is like the head office.

InMobi Group has offices in 22 places across 12 countries, which's a lot. They are very good at

what they do in parts of the world, like North America, Europe and Asia.

2.3 Key Corporate Evolution

InMobi Group is still growing and changing.

2.4 Global Presence and Operational Hubs

InMobi Group is a company that has offices over the world now. InMobi Group has offices in different places. This helps InMobi Group with its advertising technology and digital experience business.

InMobi Group has offices in Asia-Pacific, North America and Europe and Middle East. InMobi Group has a lot of offices in Asia-Pacific. This is because a lot of people use phones and digital services every day in Asia-Pacific.

Here is where InMobi Group has offices:

- Asia-Pacific: InMobi Group has 13 offices
- North America: InMobi Group has 6 offices
- Europe and Middle East: InMobi Group has 2 offices
- InMobi Group has a total of 21 offices.

This helps InMobi Group work with people who make advertisements people who show advertisements and people who use phones in many countries. InMobi Group can also make its lock screen technology, advertising platforms and digital services better. Have them in more places.

Graph 1: InMobi Group's Global Operational Hubs, by Region

INDUSTRY OVERVIEW

3.1 The Indian Digital Advertising Market

The digital advertising market has become one of the fastest-growing and most competitive media sectors globally. With many people having access to affordable high-speed 4G and 5G data the market serves a huge digital community with over ****881.25 million active mobile internet users****. This large audience has changed how companies spend their money moving it from print and TV to mobile advertising like native ads, video and rich media.

3.2 Market Growth Trends & Consumer Behaviour

The amount spent on ads in India follows big shopping events, like the national festive season. During these times Indian consumers show some digital habits:

Most People Shop on Mobile -For 58% of consumers shopping is the thing they do on them

Shopping Online and Offline- A huge 83%of consumers stay online on their mobile while shopping in stores creating a seamless shopping experience.

Trust in AI-80% of users trust AI recommendations to help them make purchasing decisions.

3.3 The Growing Mobile Ecosystem

The Indian digital advertising market is changing fast because of the growing mobile population. This growth has led to intense competition for something valuable: user attention

More Time on Mobile- The Average Indian consumer spends 4 hours and 5 minutes daily on devices, which is more than the global average.

Short Attention Span- People now have an attention span of just 8.25 seconds making it hard for

advertisers to grab their attention.

Instant Ads Work: -Advertisers using instant native ads see benefits during critical spending times capturing impulse buys and direct shopping deals.

The growth of this ecosystem supports the success of AdTech like InMobis smart lock screen. By hosting commerce and casual gaming, on the device screen platforms can capture consumer action within the critical 8-second attention window.

Graph 1: Daily Mobile Usage Time Comparison (FY 2023–24)

Interpretation:

The graph shows that Indian consumers spend more time on mobile devices compared to the global average. This creates a strong opportunity for mobile advertising companies like InMobi to engage users through mobile-first digital experiences

Graph 2: Rise of Indian Mobile Internet Users

Interpretation:

The graph shows the rapid growth of mobile internet users in India. The increase from 749 million users in 2020–21 to 881.25 million users in 2023–24 highlights the expansion of the Indian digital ecosystem and the growing importance of mobile advertising platforms.

BUSINESS MODEL

InMobi Group runs a business model that uses data to make the most money from digital stuff. They changed their approach from focusing on apps to focusing on user experiences. This helps deal with people getting bored easily and not wanting to download apps.

5.1 How InMobi Makes Money InMobi Group makes money from sources. They offer solutions to businesses. Also have digital platforms for consumers. InMobi uses a mix of business-to-business and business-, to-consumer models. InMobis approach helps them earn revenue from streams.

InMobi takes a fee when people buy and sell things on its marketplace. This is called Programmatic Marketplace Fees or Take-Rates. InMobi charges a fee to people who want to show their ads on websites.

InMobi makes money from ads in a way. It uses things like Cost-Per-Thousand Impressions, which is called CPM and Cost-Per-Click which is called CPC and Cost-Per-Acquisition which is called CPA.

When people buy things during shopping InMobi gets a small part of the money. This is called Live-Commerce Commissions.

InMobi also makes money from purchases people make while playing games on its platform. It gets money from companies that make phones and use InMobis technology.

5.2 Advertising Platform Model

InMobis Advertising Platform Model is like a system that helps people who want to show ads find websites that can show them. This is called a two- programmatic network. It works with websites all, over the world.

INMOBI GROUP REVENUE ENGINE

B2B ADVERTISING	B2C INTERACTIVE
• Programmatic Take-Rates (Fees)	• Live-Stream Commerce Cuts
• Premium Inventory Audits	• Microtransactions (Gaming Value)
• Data-as-a-Service (DaaS) SaaS	• OEM Integration Licensing Fees

- Demand-Side Platform (DSP): Allows brands and agencies to buy targeted mobile ad placements at scale using automated, real-time machine learning algorithms.
- Supply-Side Exchange: Aggregates premium ad space from thousands of independent global applications and websites, maximizing publisher revenue through automated bidding optimization.
- Cookie-less Identity Resolution: In response to tightening global data regulations, InMobi utilizes consent-based, privacy-first data matching to track and profile over 2 billion active open-web users without relying on traditional third-party tracking cookies.

5.3 Key Business Segments

The group's operational framework is organized into two primary complementary business engines:

1. B2B Enterprise: InMobi Advertising

The core business segment focused on enterprise ad technology. It delivers programmatic native, interactive video, and rich media solutions across global markets. This segment leverages predictive analytics to help brands target consumers during high-volume shopping periods, capturing localized intent without adding friction to the user journey.

2. B2C Consumer Ecosystem: Glance

An independent consumer technology subsidiary that pioneered the "Surface Zero" framework. By integrating directly with smartphone Original Equipment Manufacturers (OEMs), Glance embeds content straight onto the device's smart lock screen. This segment bypasses traditional application download barriers through two main sub-properties:

- Repose: A native live-commerce and entertainment property that enables real-time creator interactions and instant impulse purchasing.
- Nostra: A built-in, casual gaming engine that lets users play instantly on their lock screens without needing to download individual apps

PRODUCT, SERVICE AND TECHNOLOGY

InMobi Group has a lot of products that help brands, publishers and mobile consumers. These products focus on making things work smoothly creating media and giving users a great experience.

6.1 Mobile Advertising Solutions

InMobi has automated advertising options that work well in a world where mobile devices are used the most. This includes InMobi Exchange, which's like a marketplace where advertisers can buy high quality ads, like videos and interactive media from many different places. InMobi also has a Demand-Side Platform, which uses machine learning to help brands buy ads in the places at the right time.

6.2 Consumer Engagement Tools

InMobi has a subsidiary called Glance, which creates "Surface Zero" experiences that let consumers interact with things on their lock screens without having to open an app. This includes Nostra, a place where people can play games without having to download anything and Repose, a platform where people can watch live entertainment and buy things they like.

6.3 Data Analytics Services

InMobi provides business intelligence that is designed to work in a world where cookies are not used anymore. This includes Cookie- Identity Resolution, which uses data that InMobi has to create profiles of over 2 billion users in a safe and secure way. InMobi also has Mobile Action Integration, which helps optimize apps and gives insights into what competitors doing.

6.4 AI-Driven Advertising Solutions

InMobi uses intelligence to make ads more personal. This helps brands show ads to people who're most likely to be interested in them especially during times when people are most likely to buy things.

7. Technology and Innovation

InMobi Group uses technology to deliver personal value to users.

7.1 Artificial Intelligence Usage

Artificial intelligence is a part of InMobis "Surface Zero" strategy. The platform uses algorithms to organize lock screen layouts based on what each person likes so they see the things that're most important to them. This is what modern consumers want as most people trust and look for recommendations from intelligence.

7.2 Machine Learning, in Ad Targeting

InMobis machine learning models look at a lot of data to make ad campaigns work better. This includes Dynamic Creative Optimization, which changes the look and feel of ads in time to match what the user is doing and Predictive Bidding, which looks at what people have done in the past to predict what they will do in the future.

7.3 Data-Driven Technology

InMobis infrastructure is designed to handle a lot of data securely while also protecting user privacy. The company uses data and gets consent from users to deliver relevant brand interactions. This approach captures what people want away while also following data regulations.

GROWTH ANALYSIS OF INMOBI

Market Expansion and Demographic Trends

- The company InMobi is growing its market by using the fact that more people in India are using phones. The number of people using the internet on their phones in India went up from 749 million to 881.25 million.
- The company InMobi did something with its subsidiary Glance. It worked with phone makers like Samsung and Xiaomi to put its software on their phones. This means the company InMobi has its software on over 450 million phones around the world.
- People are using their phones a lot. The company InMobi is trying to get people to use their phones more. In India people spend 4 hours and 5 minutes on their phones every day. This is time than people spend on their phones in other countries.

Global Achievements and Footprint

- The company InMobi was the technology company in India to be worth over 1 billion dollars. This happened in 2011 when the company InMobi got 200 million dollars from Softbank.
- The founder of the company InMobi Naveen Tewari started another company called Glance. This company Glance is also worth over 1 billion dollars. The company Glance got money from Google and Jio Platforms.
- The company InMobi did something that not many other companies have done. It was able to make money from ads in China. The company InMobi has offices in countries. It has 21 offices in Asia, America and Europe. The company InMobi helps brands show ads to over 2 billion people who use their phones to access the internet. The company InMobi is working in, over 200 countries.

DATA ANALYSIS AND VISUALIZATION

. 4.1 Audience Content Preferences on Glance Surfaces

Data Explanation

This section tracks how consumer attention is distributed across smart lock screen interfaces. The metrics show that informative, high-utility content formats lead daily traffic engagement over deep text scrolling:

- National News (21.0%): The single largest traffic driver, fuelled by users carrying out quick, regular lock-screen checks for breaking stories.
- Sports Content (17.0%): Represents an active, highly engaged profile where sports enthusiasts track live scores and match updates.
- Entertainment Content (12.0%): Characterized by passive, visually driven viewing of rich media cards and celebrity highlights with low text interaction.
- Travel & Lifestyle (10.0%): Represents steady visual browsing that connects opportunistically with digital commerce loops.
- Business & Finance (9.0%): A focused, high-intent niche category where professionals track market movements during fast check-in windows.
- *Excel Data Table*

Graph 4.1: Audience Content Preferences on Glance Lock Screens

6.2 Advertising Efficiency: Strategic Growth Lift Over Baseline

Data Explanation

This section evaluates the direct performance surges achieved when brands deliver native, frictionless advertising campaigns directly to the device interface instead of traditional search applications. The metrics show that specific commercial verticals experience exponential conversion efficiency lifts over standard operational baselines during high-volume periods:

- Quick-Commerce Ads (+204.0%): Represents the highest surge in conversion efficiency, driven by capturing instant, micro-consumption impulse buys for emergency needs.
- E-Commerce Ads (+202.0%): Demonstrates exceptional efficiency by completely bypassing traditional web search steps to display retail deals directly onto the device standby screen.
- Video Streaming (OTT) Ads (+106.0%): Highlights an optimized capacity to lock in resting attention windows when users look for instant entertainment.

Excel Data Table

Advertising Efficiency		
Category	Growth Lift	Notes
Quick-Commerce Ads	204%	(+204%) Captures instant, emergency festive buys (sweets, gifts).
E-Commerce Ads	202%	(+202%) Bypasses search to show festive deals directly on the screen.
Video Streaming (OTT) Ads	106%	(+104%) Grabs bored users looking for instant holiday entertainment.

Graph 6.2: Advertising Efficiency: Strategic Growth Lift Over Baseline

6.3 Consumer Intent (2025 Festive Trends)

Data Explanation

This section tracks the evolving behaviour of digital shoppers during key commercial cycles, as seen in the header image image_d9ff0a.png. The metrics show a deep shift toward an automated, Omni-channel journey where consumers rely on mobile devices to instantly guide their physical and digital purchasing decisions:

- Shopping as Top Mobile Activity (58.0%): Establishes mobile devices as the primary transactional hub, with over half of the active user base prioritizing shopping over casual browsing.
- Active Online While Physically Shopping in Stores (83.0%): Highlights a strong "physical" connection. The vast majority of consumers use their mobile screens to check local inventory, cross-reference prices, and read online reviews while standing directly inside physical retail shops.
- Actively Seeking AI Product Recommendations (80.0%): Reflects high algorithmic trust, where the vast majority of consumers expect predictive systems to present tailored product options instantly without manual search navigation.

Excel Data Table

Consumer Intent (2025 Festive Trends)	
Category	Percentage
Shopping as Top Mobile Activity	58%
Active Online While Physically Shopping in Stores	83%
Actively Seeking AI Product Recommendations	80%

Graph 6.3: Consumer Intent (2025 Festive Trends)

STRATEGIC SUCCESS FACTORS OF INMOBI

InMobi Group's market leadership is driven by its ability to seamlessly connect business ads, lock screen news, and live shopping into one unified, data-sharing ecosystem.

6.1 Continuous Innovation

Rather than limiting its operations to standard, intrusive mobile formats, InMobi successfully disrupted the traditional marketing funnel by moving from a "mobile-first" to an "experience-first" model. Through Glance, the company pioneered a built-in phone feature that transforms the mobile standby screen into a live discovery page, removing the need for users to unlock their phones, search online, or download dozens of individual apps.

6.2 Strong Technology & Infrastructure

The group relies on its Glance AI Architecture, a proprietary framework that combines smart machine learning with real-time visualization. This system actively studies user preferences and automatically predicts what content, game, or product a user wants to see *before* they even perform a manual search. Furthermore, its enterprise technology provides global brands with data-driven advertising tools and predictive intelligence to target the open internet without violating user privacy.

6.3 Broad Global Market Reach

InMobi operates as a global leader making mobile and lock screen experiences simple and instant. Its infrastructure is scaled to achieve massive international distribution:

- Audience Footprint: Connecting global brands and publishers to over 2 Billion active mobile users worldwide.
- Device Penetration: Operating directly on 450 Million+ devices globally via strategic pre-integrations.
- Geographic Scope: Delivering scalable programmatic solutions across 200+ countries.

6.4 Customer-Focused Solutions

InMobi configures its consumer layer around immediate, frictionless gratification. By housing Nostra (providing instant, high-quality games with no installation needed) and Repose (powering interactive streams, product reviews, and real-time instant shopping) right on the lock screen, InMobi builds its solutions entirely around modern consumer intent and shopping habits.

BUSINESS CHALLENGES

The presentation highlights critical daily friction points, market shifts, and compliance risks that InMobi must continually navigate:

7.1 Core Market & Behavioural Challenges

- **The Goldfish Problem:** Baseline human attention spans have dropped to an average of just 8.25 seconds. Content and brand messages must catch the user's eye instantly.
- **App Download Fatigue:** Modern consumers are tired of managing multiple apps. They demand single-tap access rather than multi-step app exploration.
- **Ad Resistance:** Traditional pop-up ads actively annoy users. InMobi faces the challenge of forcing brands to switch from flat banners to fun, interactive content.

7.2 Privacy & Content Risks

- **New Privacy Laws:** Legacy user-tracking methods are being blocked globally. InMobi must continuously innovate to find privacy-safe ad delivery mechanisms that preserve targeting data.
- **Keeping Content Safe:** Because it operates directly on a phone's main standby screen, the platform faces intense content vetting risks. It must ensure the screen only serves safe, trusted news from premium media partners—never random, unverified user-generated posts.
- **Lock Screen Crowding:** Serving too many automated suggestions can easily annoy consumers who just want a quick, clean glance at their device.

STATERGIC FINDINGS

1. **Surface Zero is a Major Entry Point:** The mobile lock screen has emerged as the premier real estate to capture user attention at the first screen interaction. Lock-screen traffic is heavily dominated by National News (21%), Sports (17%), and Entertainment (12%)
2. **Frictionless Formats Outperform Banners:** Single-tap live updates drastically outperform traditional application or web browsing. Ad campaigns deployed at the exact "screen-light" moment during festive seasons drive massive conversion boosts, specifically across Quick-Commerce (+204%), E-Commerce (+202%), and OTT Streaming (+106%)
3. **The Rise of the Omnipresent, AI-Driven Consumer:** Indian shoppers expect interactive, highly intelligent experiences. An overwhelming 85% list shopping as their top mobile activity during peak cycles, 83% use their mobile devices online while physically browsing inside stores, and 80% explicitly expect AI product recommendations to predict their wants.

RECOMMENDATIONS

To win the attention of modern shoppers and maximize return on investment (ROI), the presentation outlines three main actions and execution steps:

- Utilize the Lock Screen: Brands must stop spending marketing budgets exclusively on traditional, soloed applications; corporate ad spend should be redirected toward device standby screens
- Stop the 8-Step Journey: Brands must stop making users click through complex, multi-step paths to complete a purchase. Companies should leverage Glance AI to predict and serve relevant content, building single-tap, instant-access purchasing experiences directly on the screen.
- Adopt AI Shopping & Interactive Tools: Replace flat, static banner advertisements with rich media formats like full-screen videos, playable games, virtual try-ons, and auto-recommendations to help shoppers choose and convert faster.
- Be Omnipresent with Clean Visuals: Since 92% of festive shoppers buy more when they see a brand across multiple screens, businesses must deploy household-level, multi-screen campaigns. These campaigns should maintain a safe, professional brand presence by using premium visuals and trusted creators.

CONCLUSION

Mobile marketing has fundamentally changed; success is no longer about simply being accessible on a mobile phone—it is about delivering a premium experience instantly. The future belongs to smart, automated systems that show users exactly what they want the very second their phone screen lights up.

By leveraging its dual B2B enterprise engine and B2C lock-screen layer, InMobi successfully eliminates the traditional app journey. Backed by global giants like Google and Jio Platforms, InMobi's experience-first ecosystem provides a robust, privacy-safe template for capturing consumer intent within tight 8-second attention windows.
